

EN:

The European Commission presents in Section 5 NEXT STEPS, which air quality strategy is necessary for research:

“5.1. Evaluation, review & research

This Strategy will be reviewed in 2010 and this will feed into the final evaluation of the 6th EAP. Ongoing assessment of policies will continue using existing indicators and reported information. Assessment work will be increased in readiness for the review.

The analysis underpinning this Strategy builds upon Community research on air pollution, including the health impacts of particles, performed under the various RTD Framework Programmes (CLEAR cluster (<http://www.nilu.no/clear/>); INTEGAIRE thematic network (<http://www.integaire.org/>)). The Strategy also builds on economic-environmental models and tools developed using Community RTD funds (Health valuation from ExternE and NewExt projects; macroeconomic analysis used the general equilibrium model GEM-E3). In the coming years more research will be required on emission sources, atmospheric chemistry and pollutant dispersion and on the effects of air pollution on health and the environment including long term European epidemiological studies. We will also need to improve the monetary evaluation of ecosystem impacts and the analysis of costs and effectiveness of measures actually implemented. This will require EU RTD funding, work by the Joint Research Centre of the European Commission, and the support of the Member States.”

4 UFIPOLNET second annual workshop from 16 – 17 May 2006 (EN)

On the next UFIPOLNET workshop scientists and air pollution network manager from Sweden, Czech Republic, USA and Germany will meet. This meeting will be hosted by the Leibniz Institute of Tropospheric Research in Leipzig. The Agenda includes evaluation of the past work, practical lessons for the user team and planning of implementation of the particle measuring device. The next issue of UFIPOLNETnews you will deal with the outcomes of this workshop.
